

Eliminate unsightly cables in hard to wire applications, wirelessly.

- Plug 'n play - No software needed
- Easy setup, get wireless music in seconds
- Robust and dedicated network for your audio
- Wireless extra-deep 10Hz to 20kHz transmission
- No interference or delays
- Works with Mac, PC or any analog audio source
- Flexible functionality, up to four independent channels

You love the deep, impactful bass that an Atlantic powered subwoofer adds to your home entertainment system. But you wish there was a way to do away with the unsightly 20-ft long signal cable that connects your subwoofer to the receiver halfway across the room.

Eliminate those wires with the Atlantic Technology WA-60 Wireless Audio System.

The WA-60 connects your subwoofer to your receiver/processor wirelessly, with a simple-to-use, inconspicuous transmitter-receiver system. Perfect for any home entertainment system, the WA-60 has a range of up to 70 feet; 150 feet if it's line-of-sight.

Best of all, with the WA-60, the sound is CD-quality, with no interference or delay and easy plug-and-play functionality—no software needed.

But it's not just for subwoofers. With the WA-60 you can transmit any full-range audio source anywhere you want it, wirelessly. Additional applications include sharing computer-based audio with an AV receiver or sharing a main system's sources with secondary rooms.

Operate up to 4 separate WA-60 systems without worrying about signal overlap.

WA-60 Wireless Audio Transmitter/Receiver System

USB for Power

Select channels for up to 4 independent systems

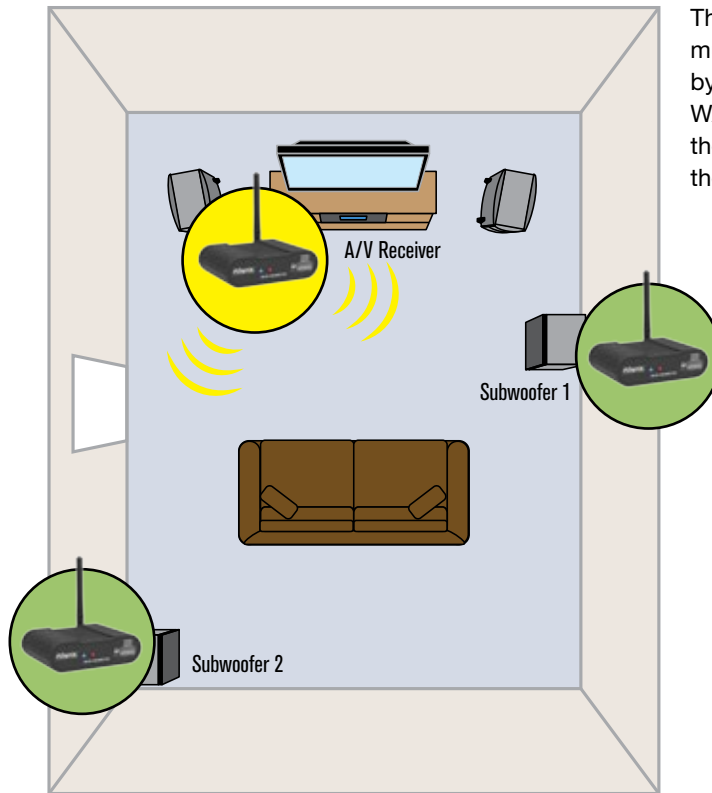

Simple RCA input/output

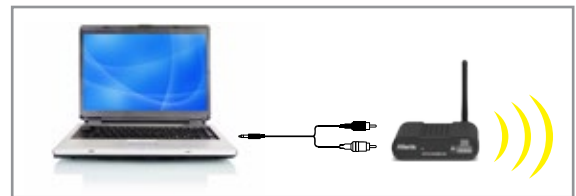

External antenna for increased range

Send Full-Bandwidth Stereo—Wirelessly!

The WA-60 lets you have multiple wireless subwoofers by simply adding additional WA-60 receivers and setting them to the same “zone” as the WA-60 transmitter.

You can also send audio program content wirelessly from your computer to your home entertainment system by using the supplied stereo mini-to-RCA cable. Simply connect the WA-60 transmitter to your computer’s headphone or line output and connect the WA-60 receiver to your AV receiver/processor. Imagine—the Internet radio (or any other computer-based audio program) that you enjoy on your computer, now sent wirelessly to your high-end entertainment system!

Specifications

Frequency	10 Hz to 20kHz, great for subwoofers
Range	Line of sight: 130-150' Obstructed: 70'
Power	+5VDC (USB)
Audio In/Out	Stereo RCA
RF Band	2.4GHz
Available Wireless Channels	4
SNR	93dB
Dimensions (with antenna)	3¾" W x 3¾" H x 4" D (95mm x 98mm x 102mm)
Weight	(each, unpacked) 3.5 oz; 0.1kg
