

## Congratulations on your purchase of a MaxMix T2 Kit

You have made an investment that we are confident will improve your listening experience and bring you joy for many years to come.

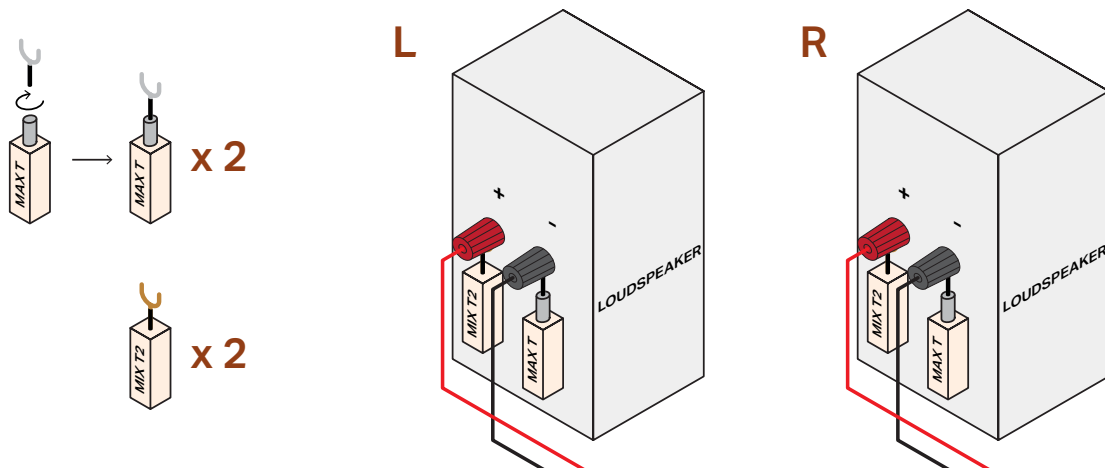

### How it works

All cabling that carries AC current generates magnetism, inductance, and capacitance. With the **MaxMix T2 Kit**, we affect the magnetism where it is strongest and causes the most damage, at the contact surfaces.

Additionally, when using the **MaxMix T2 Kit**, vibrations arising from both the cables - and the cabinet itself - are reduced. This results in a significant improvement in sound quality.

### Getting started

1. Screw on the silver spades to each of the Max T Ground Posts.
2. Power down your equipment and disconnect from the mains.
3. Connect the Max T to the negative pole on the left-hand loudspeaker along with the negative speaker cable.
4. Connect the Mix T2 in the same way to the positive pole of the speaker along with the positive speaker cable.
5. Repeat steps 3 and 4 for the right-hand speaker.
6. Switch on your equipment and enjoy the improved soundstage and microdetails in the music.

### Complimentary products

If you enjoy your experience with the **MaxMix T2 Kit**, we recommend trying **Protectus** in your system. Find out more at [entreq.com/protectus](https://entreq.com/protectus)
